RMADEFENSE.COM

No Compromise. No Failure.

Utilizing the most advanced high-strength materials in the world like Ultra High Molecular Weight Polyethylene, Alumina Oxide, and Silicon Carbide, RMA produces the world's strongest body armor right here in the United States of America.

RMA's ISO 9001 certified manufacturing facility in Centerville, Iowa produces thousands of plates per week for civilian, law enforcement, and military customers worldwide.

Ultra-light and ultra-strong body armor technologies previously only available to government agencies are now available to all Americans, regardless of affiliation.

Founded by a US Marine and former law enforcement officer, RMA's manufacturing and quality control are second to none. RMA Armament is the only major hard armor manufacturer never to fail an NIJ or DOD follow-up inspection. We're proud to build the world's finest armor products for protecting your home, your community, and your country.

Don't bet your life on anything less than the best.

1192

Body armor products are certified by the National Institute of Justice to meet or exceed ballistic threat levels accepted by the United States federal government for law enforcement use. The current ballistic test standard known as NIJ 0101.06 defines levels II, IIIA, III, and IV in ascending order of threat protection.

While NIJ Certification on a body armor product is indicative of a minimum level of protection to achieve standard compliance, RMA overbuilds all of our plates to rate multiple hits for their threat level, no matter if the NIJ requires it or not.

Level IV

The toughest combination of armor to manufacture is American-made lightweight ceramic body armor with the highest level of ballistic protection at an affordable price point. But that's what RMA has strived for with this lightweight Level IV body armor plate (Model #1192) in multi-curve medium sizing.

Weighing just 5.7lbs, this lightweight level IV body armor plate is ballistically tested to the NIJ .06 standard, and to the upcoming NIJ RF3 certification standards, which means this plate can defeat the 30-06 M2AP, M855A1 and much more. The multi-curve contour of this lightweight level IV body armor plate makes it popular among law enforcement and security professionals who spend much of their day wearing the body armor, while still demanding the highest level of armor protection.

Type: Stand Alone Armor
Coverage: Full Edge-to-Edge Protection
Dimensions: 9.5" x 12.5" Strikeface
Warranty: 5 Year Manufacturer's Warranty
Armor Shape: Multi-Curve
Armor Cut: SAPI/ESAPI Cut
Weight: 5.7 lbs
Thickness: 0.9 Inch

Beyond NIJ

The National Institute of Justice certifies body armor products as compliant among a range of standards after a series of rigorous tests, including heat, cold, water, and finally ballistic threats.

While NIJ testing is indicative of a minimum standard that all body armor products should meet, some products exist outside the scope of NIJ standards thanks to new manufacturing technology and materials that address new challenges presented by munition developments.

In an ever-changing arms race, militaries are constantly seeking new ammunition that will outperform older standards of body armor. While the NIJ will continue to address these special threat categories over time by developing new standards such as NIJ 0101.07, RMA is beating them to the punch.

In response to the increased ballistic performance of the M855 round over the older M193, RMA developed our original 1090 series to be substantially lighter weight than a level IV armor system while maintaining performance in defeating this extremely common 'green tip' threat. However, the US military recently adopted the next generation of military combat 5.56 cartridge, named M855A1. Lead is no more, replaced by a substantially higher quantity of steel and copper. This round maintains nearly identical accuracy as the M855 green tip, while increasing penetration power.

Unable to stop this new threat, many armor manufacturers resorted to testing their plates across a longer distance such as 100 yards where substantial energy is lost before impact after failing at closer distances. We don't believe in lowering our standards to meet new challenges. So, we went back to the drawing board and built the next generation of our venerable 1090 series. The Generation 2 platform dramatically exceeds previous NIJ Level III standards and outperforms the competition by defeating M855 and M855A1 at close range.

1090

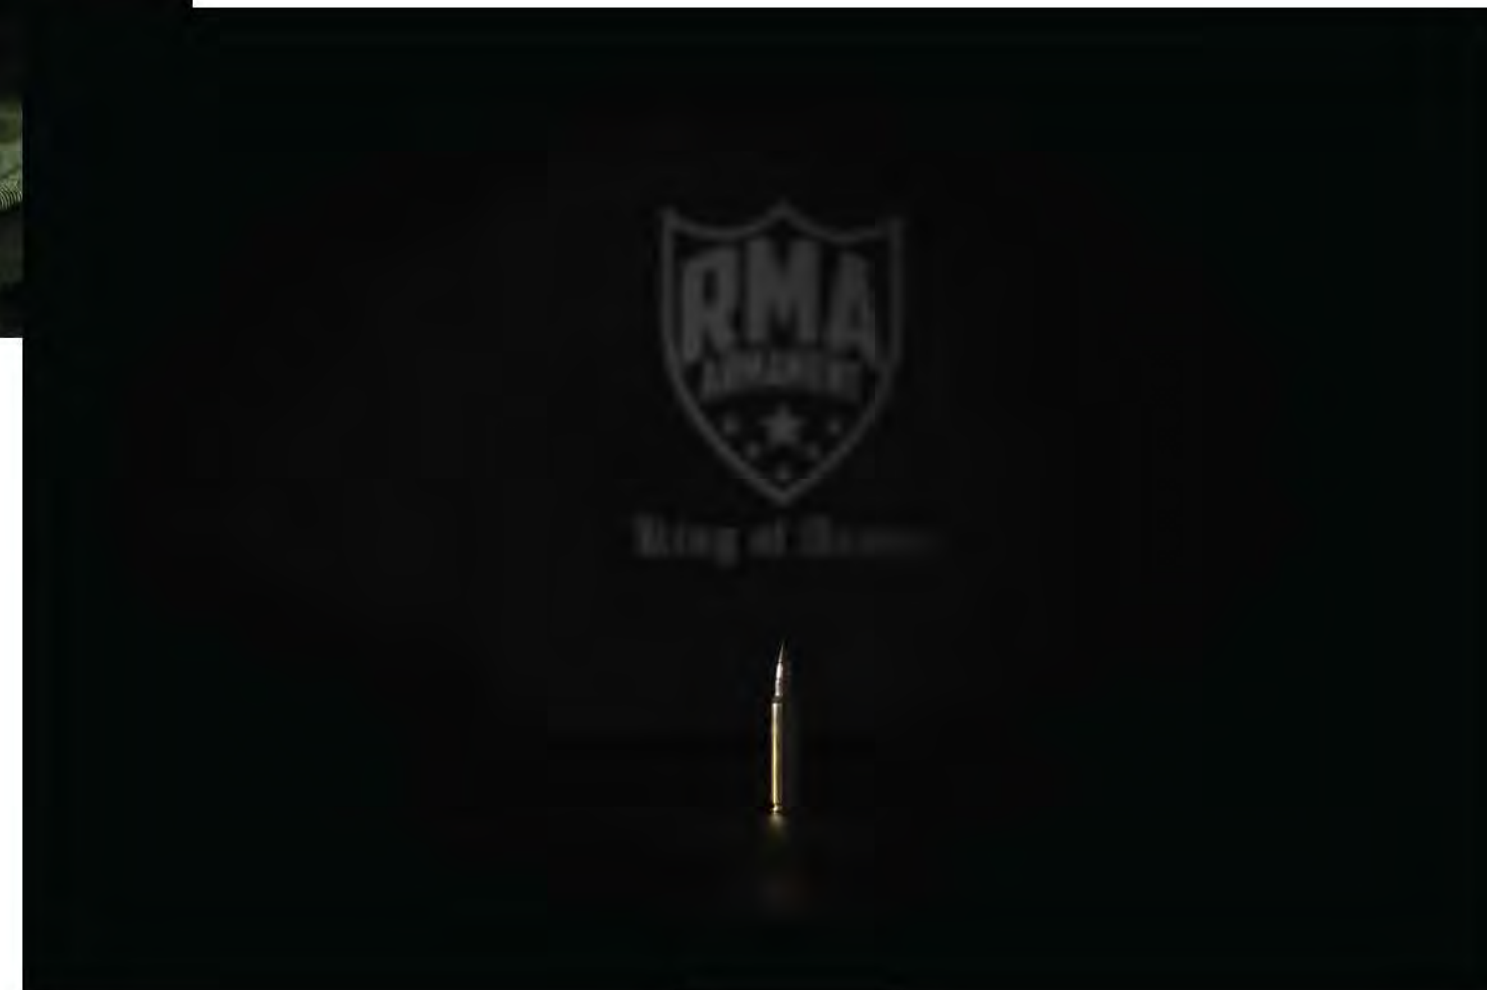

GEN 2

RMA's revolutionary III+ series has evolved.

Thanks to a carefully-engineered balance of Ultra High Molecular Weight Polyethylene and a proprietary Alumina Oxide ceramic core, RMA's new 1090 series protects against the same threats as our Generation 1 plate such as M855 and M193, but additionally stops the new high-speed M855A1 steel and copper penetrator round cold at 25 yards. Even heavier steel armor can't do that.

Stronger than ever before, RMA's new 1090 Generation 2 III+ plates break new ground in protection and lightweight wearability.

Level III

Until recently, Level III rifle-rated body armor wasn't very practical. While Level IV ceramic plates protect against more types of cartridges including armor piercing rounds, Level III protected against multiple strikes from 7.62X51 NATO. As a consequence, many Level III plates were slightly lighter versions of Level IV plates and were comprised of heavier ceramics or AR500 steel. With the invention of UHMWPE fabric, Level III certification became possible to achieve with no ceramics or hard materials whatsoever.

Thanks to this remarkable discovery, polyethylene can be stacked in a wearable format that has not only the ability to defeat six rounds of NATO M80 Ball, but additionally a variety of other cartridges from relatively short distances that aren't typically included among Level III tests.

The best part? Modern Level III plates from RMA are so unbelievably lightweight that they actually float in water.

If your area of operations might include water or you're looking for the ultimate in lightweight protection, RMA's NIJ-Certified Level III 1078, 1088, and 1060 series plates should be your first choice.

Level III

POLICE

Ultra-Lightweight Rifle-Rated NIJ Certified protection ideal for law enforcement and maritime operations.

RMA produces three different NIJ-Certified Level III plates that are so lightweight, they actually float in water. But that doesn't mean you'll be lacking in performance. Each NIJ-Certified Level III plate is guaranteed to defeat 6 rounds of 7.62X51 M80 ammunition.

Ideal standalone armor for maritime forces or as an ultra-lightweight upgrade to a law enforcement soft armor vest, RMA's Level III plates deliver unparalleled performance and comfort in a compact and bouyant package.

Level IIIA

80% of firearms threats faced by police officers everyday are from handguns. As a result, the federal government created the Ballistic Vest Partnership program to help municipal, county, tribal, and state agencies defray the costs associated with NIJ 0101.06 Level II and IIIA soft armor vests.

But Level IIIA body armor is also relevant for emergency and home defense use for the civilian population. Because of its ultra thin, light, and flexible nature, concealable armor is more popular than ever before. While rifle-rated plates are very difficult to conceal and present a human terrain issue due to their overt nature, concealable soft armor stands up to 80% of the potential ballistic threats you're likely to face on a daily basis and can remain completely hidden from the public.

With unparalleled multi-hit capabilities, Ultra High Molecular Weight Polyethylene construction is capable of defeating dozens of rounds from common ball and hollowpoint handgun threats like 9mm, .357 Sig, .40 S&W, .45 ACP, 5.7, and more; even 12 Gauge shotgun slugs.

Between shotguns, pistol caliber carbines, and handguns, tier one NIJ-Certified concealable armor previously only available to military, law enforcement, and first responders is now available to all Americans.

The Operator BLS/IFAK™ Kit is designed to equip the individual operator with the Basic Life Support tools needed for immediate Self-Aid/Buddy-Aid. This Improved First Aid Kit is configured to address leading causes of preventable death due to penetrating injuries. The versatile BLS IFAK Kit can be worn by the operator in one of three methods, drop down leg rig, attaché to the assault vest/body armor with MOLLE-style connectors or attached directly to the duty belt.

Sand & water resistant, self-repairing zipper with silent 550 cord pulls
MOLLE Style Attachment System Compatible
Removable Belt and Leg Straps
Leg Strap with Quick-Grip™

1 x Bag (IFAK)
6 x Black Talon® Nitrile Trauma Gloves (3 pr.)
1 x Nasopharyngeal Airway 28F with Lubricant
1 x HyFin® Vent Chest Seal Twin Pack
A chest seal is used when a patient has penetrating chest trauma from neck to navel, on the front, side or back of the chest. The chest seal doesn't control bleeding inside the chest cavity. Instead, the chest seal prevents air from entering the chest cavity.
1 x C-A-T® (Combat Application Tourniquet®)
The patented C-A-T® is a true one-handed tourniquet proven to be 100% effective by the U.S. Army's Institute of Surgical Research.
1 x ETD™ 6 in. Emergency Trauma Dressing
The trauma dressing provides an effective, constant pressure bandage used for the treatment of wounds
2 x S-Rolled Gauze™ (4.5 in. x 4.1 yd)
1 x Polycarbonate Eye Shield
1 x Permanent Marker
1 x Combat Casualty Card

[SHOP NOW](#)

RMA Armament is proud to manufacture 3/8 inch AR500 steel gong targets as you hone your shooting skills on the range. RMA's gong targets are manufactured from the highest quality 3/8 inch thick AR500 steel and are rated for common pistol calibers at a distance of 10 yards. Move the targets back to at least 100 yards to utilize them with common rifle calibers as well.

But what's different about RMA Armament targets? Instead of using a plasma cutter like many others, we use a water jet machine to cut our targets. This machine makes finer, more detailed cuts without the heat transfer of a laser or plasma cutter that softens the steel. The plates are then brushed and cleaned of any debris before being taken into our paint booth. We use an electrostatic paint system to take the finished look over the top. As with everything else that RMA produces, these gong targets are also manufactured at our Centerville, Iowa manufacturing fortress.
